

EXPERIENCE THE CONNECTED JAIL

**ELIMINATE TECHNOLOGY SILOES, EMPOWER YOUR
PERSONNEL, MAINTAIN CONTROL**

UNDERSTAFFING. REDUCED FUNDING. COMPLEX OFFENDER DEMOGRAPHICS.

Today's corrections environment is rapidly changing and corrections officers face a growing list of challenges. According to the 2019 Motorola Solutions Law Enforcement Survey, understaffing is by far the most pressing. This rampant understaffing along with a pervasive lack of funding has meant fewer corrections officers taking on much more responsibility, while still expected to stay consistent in reporting, booking, managing inmates and other day-to-day tasks. Now, we're seeing the detrimental effects: wide-ranging inefficiencies, growing jail incidents and associated lawsuits, difficulty recruiting new officers, and overall public safety risks as inmates are not accounted for properly.

The right jail and inmate management solution can make a big difference, acting as a force multiplier that empowers correction officers to do their job more efficiently and effectively. Simply bolting on new systems to existing infrastructure is not the answer. Jail and inmate management solutions must meet today's needs by connecting and maximizing every available tool and technology investment, while being flexible enough to adapt to tomorrow's challenges. That's the promise of the Connected Jail. It integrates, streamlines, and amplifies existing technologies, empowering corrections officers to better manage jail administration and inmates with less resources.

THE CONNECTED JAIL:

A Force Multiplier

The Connected Jail is a complete, end-to-end jail system that enhances safety, generates greater awareness, and enables you to maintain greater control of your corrections operation. It's powered by a robust jail and inmate management software platform that works seamlessly with your existing technology. It enables more streamlined processes, from booking to release, while helping corrections officers maintain accuracy and consistency. With more current and actionable data, it's much easier to act upon insights. Now, officers can better understand their surroundings and proactively mitigate the potential for incidents.

Together with rugged, ultra-reliable communications devices and intelligent surveillance systems, the Connected Jail acts as a force multiplier, greatly increasing officer efficiency and accuracy, so you can do more with the assets and technology investments you already have. The Connected Jail brings more intelligence, awareness, and responsiveness to your team through a full spectrum of your technology solutions including jail and inmate management software, video security and access control, and officer communication and safety solutions.

JAIL AND INMATE MANAGEMENT SOFTWARE:

Maintain Control. Keep the Peace.

THE CHALLENGE:

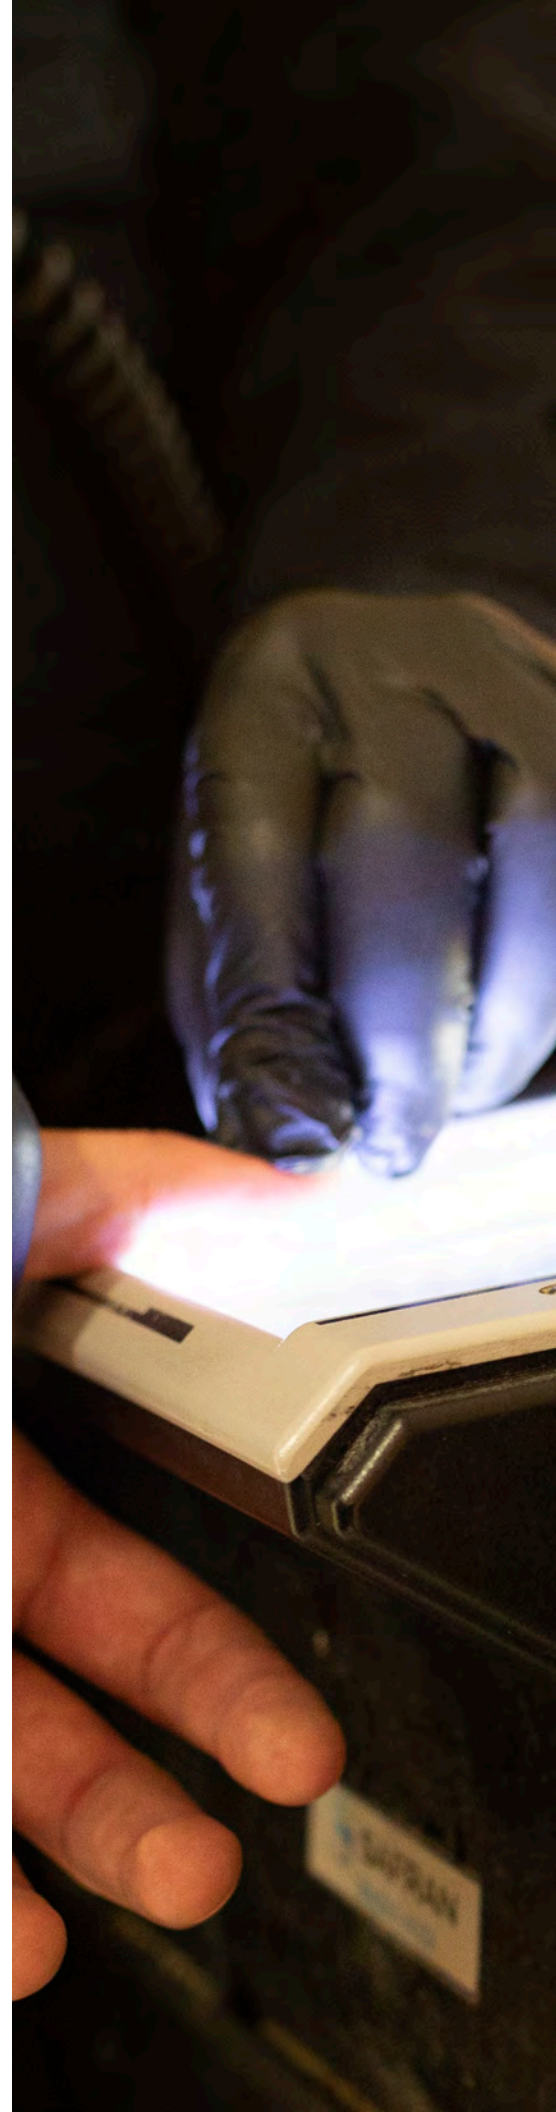

The corrections environment has changed drastically. Jail and inmate management software just hasn't kept up. Antiquated user experiences and missing features make most jail management platforms a poor fit with the new reality of corrections: complex offender demographics and limited resources.

THE SOLUTION:

Streamline offender intake and release processes, increase access to actionable information and ultimately improve operational efficiency. Information from an arrest report filled out in PremierOne or Spillman Flex Records pre-populates a booking form in CommandCentral Jail as the officer begins the intake process. A booking checklist configured specifically to agency requirements and integrated with other systems needed gets an offender behind bars quickly. Biometric verification enables officers to verifiably release inmates, after accurately tracking time served. All records and data are synced with PremierOne or Spillman Flex Records systems so everyone is always up-to-date.

THE TECHNOLOGY:

CommandCentral Jail.

OFFICER SAFETY AND COMMUNICATION: Safer, More Informed Responsiveness

THE CHALLENGE:

When an incident occurs, corrections officers need technology that keeps them connected, gives them a lifeline to help, and protects them in the face of accusations of wrongdoing. Reliable voice communication between officers is the critical first step to ensure safety. In addition, officers need to capture the full picture of every incident and that starts with on-body video footage.

THE SOLUTION:

When an incident occurs, officers rely on clear, instant communication from APX radios to call for back-up. APX radios are ultra-reliable and secure enough to handle both emergency incident response and day-to-day procedures. Si Series body-worn cameras record clear, evidentiary audio and video, to capture the truth of any situation that occurs in the jail. Once an incident is contained, all digital evidence from stationary cameras, body-worn cameras, and radio traffic recordings is automatically bundled into an incident case folder in CommandCentral Vault. Now, it's easy to manage digital content and build a case when needed.

THE TECHNOLOGY:

APX Radios. Si Series Body-Worn Cameras. CommandCentral Vault.

VIDEO SECURITY AND ACCESS CONTROL: Empower Officers with Enhanced Awareness

THE CHALLENGE:

With limited resources and increasing inmate to officer ratios, there needs to be a better way to monitor the interior and exterior of the jail without having to hire or reassign more officers.

THE SOLUTION:

Avigilon AI-enhanced cameras use machine learning to understand what normal jail exterior and interior scenes should look like, then automatically flags unusual behavior and alerts officers. These cameras integrate with access control systems for comprehensive monitoring of personnel entering and exiting the facility.

Simultaneously, the Sheriff's Office uses Vigilant License Plate Recognition and Facial Recognition to identify visitors to the jail who may have active warrants out for their arrest, may be on an agency watch list, or may be a person of interest in an ongoing investigation. Now, potential threats are better distinguished from daily routines and stopped before they can become a larger problem.

THE TECHNOLOGY:

Avigilon Cameras & Access Control. Vigilant License Plate Recognition & Facial Recognition.

THE CONNECTED JAIL:

More Efficient Corrections Management

Today, corrections officers must contend with chronic understaffing at jails and the wide-ranging ramifications it causes. Technology can do more to help. With over 90 years of experience serving public safety, Motorola Solutions is an experienced partner you can trust. We support your mission with end-to-end, integrated jail management solutions that infuse real-time, actionable intelligence into your operations. The Connected Jail eliminates technology siloes, empowers your personnel, and helps you maintain greater control. Your technology becomes a force multiplier, not a hindrance. So, you can do more with less today, while positioning your operations to gain new value from tomorrow's advances.
